

**Amendments to the Claims:**

The following listing of claims will replace all prior versions, and listings, of claims in the application:

1. (Currently Amended) An information display system comprising:  
plural display devices that each continue to display an image after cutoff of electric power; and  
a connector for delivering electric power and for sending information from an information sending means to the plural display means, wherein the information sent from the information sending means is displayable on the plural display means, wherein the plural display devices are detachably attached to the connector, and exchange information with the information sending means by a wireless system.
2. (Previously Presented) An information display system according to Claim 1, wherein the information displayed on the display devices is kept even in a state where the display devices are detached from the connector.
3. (Previously Presented) An information display system according to Claim 1, wherein the display devices possess setting information and have a function of controlling whether or not they display information, in accordance with selection information from the information sending means, and the information sending means detects the setting information possessed by the display devices and sends the selection information along with the information to-be-displayed on the basis of the setting information, thereby to display the information on selected ones of the display devices.
4. (Previously Presented) An information display system according to Claim 3, wherein the setting information contains information on a size of the display devices.
5. (Canceled)

6. (Currently Amended) An information display system comprising:  
plural display devices that each continue to display an image after cutoff of electric power;  
plural information writing means for writing information to the display devices; and  
a connector for delivering electric power and for sending the information, which is to be displayed by the plural display devices, to the plural information writing means, wherein the information sent from ~~the~~an information sending means can be displayed on the plural display devices, wherein the plural display devices are detachably attached to the connector, and exchange information with the information sending means by a wireless system.

7. (Previously Presented) An information display system according to Claim 6, wherein the display devices are detachably attached to the information writing means, and the displayed information is kept even in a state where the display devices are detached from the information writing means and the connector.

8. (Previously Presented) An information display system according to Claim 6, wherein the display devices have a function of controlling whether or not they display the information, in accordance with selection information from the information sending means, and the information sending means adds selection information, for selecting the information in the information writing means, to the information to-be-displayed and sends them together.

9. (Previously Presented) An information display system according to Claim 6, wherein the information writing means has a function of selecting the information sent from the information sending means, and the information sending means adds selection information for selecting the information in the information writing means, to the information to-be-displayed and sends them together.

10. (Original) An information display system according to Claim 9, wherein the information writing means holds setting information therein, and the information sending means has a function of collecting the setting information from the plural information writing means and adds the selection information to the information to-be-displayed on the basis of the collected setting information.

11. (Previously Presented) An information display system according to Claim 10, wherein the information writing means contains information on presence or absence of the display device, as the setting information.

12. (Original) An information display system according to Claim 6, wherein the information sending means and the information writing means exchange information by a wireless system.

13. (Previously Presented) An information display system according to Claim 1, further comprising:

image pickup means for reading an image, wherein the information sending means sends the image read by the image pickup means, as the information which is to be displayed on the display devices.

14. (Previously Presented) An information display system according to Claim 1, wherein the information sending means turns externally received information into an image and sends the image as the information which is to be displayed on the display devices.
